SIXPRO wins coveted Training Award given out from the Chamber of Commerce!

Awarded at the prestigious Gala des Affaires held on November 7th, the Training Award recognizes Sixpro's innovative approach in the development and coaching of our production supervisors' management abilities.

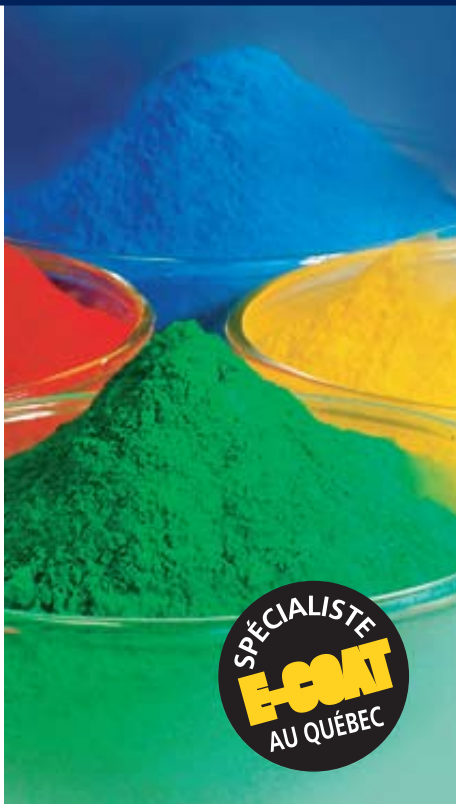

The prize was awarded by the Chamber of Commerce to Claude Fournier, Operations Manager at Sixpro.

Specifically, the on-the-job intensive training was held over a six-month period and covered the following:

- More than 1500 hours of training for the supervisors
- More than 150 hours of coaching for team leaders
- Developing communication plans
- Implementing shift transition briefings
- Establishing logs with action plans
- Coaching on management abilities
- Developing tools to evaluate SIXPRO's overall management system.

The results ?

1. All supervisors went from Level 1 to the highest level, Level 5, in the evaluation of their management abilities (the provincial average is between Levels 1 and 2).
2. Decrease of 40% of our overall non-quality (returns, internal and external non-quality).

- Electrocoating (e-coat)
- Powder coating
- Thermoplastics
(Plascoat and Nylon coatings)

Do your parts need coatings that will resist to almost anything?

Ask about our NYLON coatings!
Commonly used in Europe,
but still relatively unknown
in North America,
Nylon will impress
thanks to its
incredible
longevity!

*To become better every day
to establish world-class
business practices!*

Client Testimonial :

Established for over 20 years, SURPLEC has targeted the environment as its marketing strategy by refurbishing equipment destined to the transport and distribution of electricity, namely for transformers.

As Sylvain Roy, VP and director of operations mentions, “since 1987, our company has continually grown, and we will end 2009 with an increase of 30% of our sales!” Let’s face it: this is not something we’ve often heard this year!

SURPLEC started its partnership with Sixpro in order to comply with Hydro-Quebec’s very high quality standards, and uses mechanical preparation to strip parts, followed by the ecoat and powder coating processes.

The Sixpro team is proud to be associated with SURPLEC, a company known for its rigorous standards and its will to succeed!

Did you know ?

Starting in 2010, SIXPRO offers you an even better ecoat!

The automobile industry is always looking for products offering increased performance, and it is in this regard that the industry now recommends the use of the Powercron 6000, supplied by PPG.

This product, authorized in all the major OEM's specifications (Toyota, Ford, GM, Volvo, Mercedes, Nissan, BMW, and others), will replace the Powercron 8000 at Sixpro, starting in January.

Visually, you will notice a higher gloss on your ecoated parts; other than that, all of the Powercron 8000's performance standards are either identical or increased in the new 6000 version.

Do not hesitate to contact your technical representative for more information!
